

## Sensor solutions for small and medium business

***Sensors provide our shop with an extra layer of protection now. The sensor program gives us peace of mind since an alert allows staff to respond quickly to temperature perils.***

***~Manager, Grocery Store***

Imagine opening your business one morning to discover a pipe had burst in the bathroom or a hot water heater had leaked, causing flooding and damage to your business. You may be forced to close for cleanup and repairs, causing a disruption in your business.

Now, imagine that the same leak or pipe had burst in your building, but you were alerted by text, email, or phone call that there was an issue — before significant damage occurred.

### **A powerful leak and freeze monitoring system**

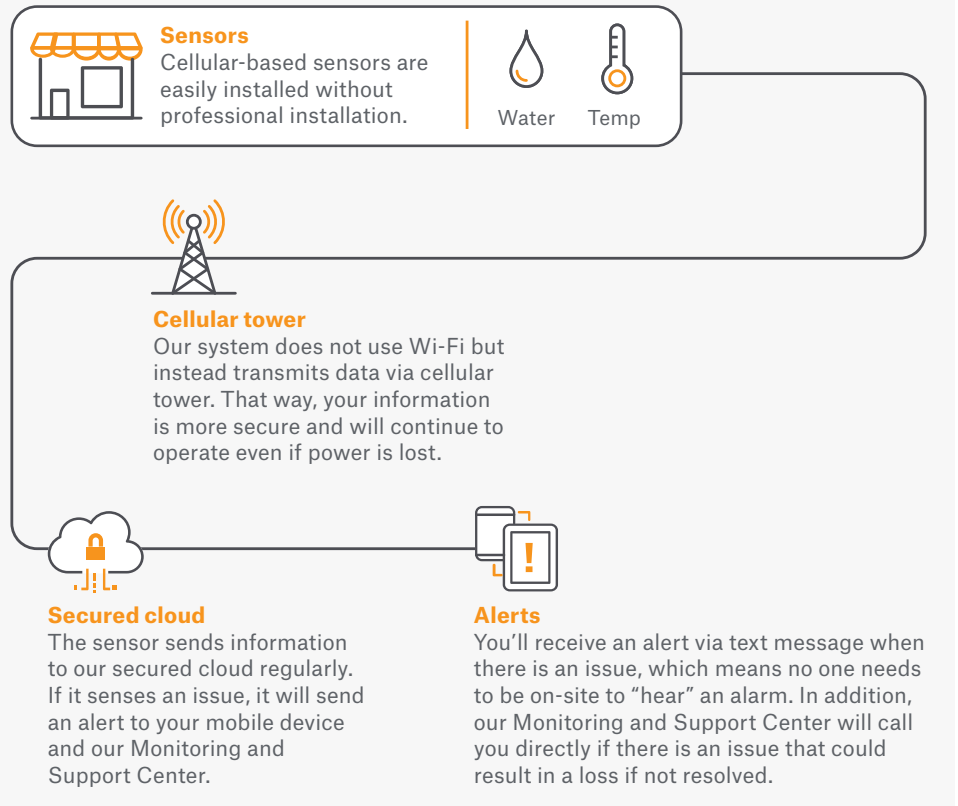

Your insurance company has partnered with HSB to provide you with a valuable sensor program using the latest sensor technology to detect the presence of water or to monitor indoor temperatures telling you if pipes could potentially freeze, causing them to burst and flood your business.

## Benefits of a sensor solution

-  You'll catch issues early, so there is less (or no) downtime for repairs.
-  They're simple and inexpensive to install — simply place them on the floor.
-  You'll get support 24/7 from our U.S.-based Monitoring and Support Center.
-  Our sensors use cellular technology, so they're not integrated into your Wi-Fi network and won't use your bandwidth.
-  Our special encryption means your data is safe and secure.
-  Our commercial-grade sensors are built to last.

## How Sensor Solutions by HSB™ works:

Sensor Solutions by HSB can help avoid or reduce the damage to your business by detecting water leaks and changes in temperature, and then sending an alert so you can fix the problem.

## Connect and protect your business from potential damage from water and freeze
